

**Solve each problem.****Answers**

- Ex)** A geologist had two rocks on a scale that weighed 3.19 kilograms together. Rock A was 0.8 of the total weight. How much did rock A weigh?
- 1) An adult turtle weighed 4.78 grams. How much would 2 adult turtles weigh?
- 2) A large container of lemon juice used 0.29 of a bag of lemons. If a small container used 0.6 the amount of a large container, how much does a small container use?
- 3) A restaurant used 3 kilograms of potatoes during a lunch rush. If they used 0.9 as much beef, how many kilograms of beef did they use?
- 4) On Monday Henry picked up 0.76 of a kilogram of cans to recycle. On Tuesday he picked up 0.1 that amount. How much did Henry pick up on Tuesday?
- 5) Henry filled a pitcher up 0.3 full then poured 0.70 of the pitcher into a glass. What amount of the total pitcher did he pour into the glass?
- 6) A full package of paper weighs 3.9 kilograms. If Henry put 3.46 packages of paper on a scale, how much would they weigh?
- 7) Sarah needed 2.9 meters of thread to finish a pillow she was making. If she has 4 times as much thread as she needs, what is the length of the thread she has?
- 8) Henry ran 3 miles on his first day of training. The next day he ran 0.22 that distance. How far did he run the second day?
- 9) Sarah had a piece of thread exactly 3.37 yards long. After doing some sewing, she had 0.88 the original amount left. How much does she have left?
- 10) A bag of strawberry candy takes 3.9 ounces of strawberries to make. If you have 3.1 bags, how many ounces of strawberries did it take to make them?

Ex. 2.552

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

7. _____

8. _____

9. _____

10. _____
